

Description

It's simple and rugged design make it suitable for severe applications at high temperatures or with highly abrasive or erosive materials. Lift Plug Valve is utilized as an Isolation and Switch valve. In visbreaking, cracking, hydroprocessing, distillation and deasphalting refinery applications, the lift plug has proven to be an ideal isolation valve with many advantages over traditional ball valves and t-pieces.

Features:

- Seat seal design ensures a perfect seal
- Seals are not worn during operation
- No dead spaces
- Integral Block and Bleed
- Available in high temperature and pressure designs
- Electric, pneumatic, and hydraulic actuation available
- Straight or Inverted Plug, full or reduced bore, round or oval
- Top or bottom entry for easy maintenance
- Nominal Pressure:CL150-600lb
- Nominal Diameter:2-14"
